

Care of upholstery

Always refer to fabric manufacturers own specific guidelines.

Vacuum regularly on a low setting to remove dust and grit which can break fibres in the fabric structure.

Tend to spills and stains quickly while they're still fresh. Our fabric suppliers recommend a damp cloth to mop up spills before they have time to soak in. Once the excess liquid has been removed, the fabric can then be cleaned using cleaning solution such as upholstery shampoo. The longer stains and spills remain on the fabric, the harder they are to remove.

Stain repellent treatment will add a level of protection in heavy soiling areas such as canteens and student areas, but does not make a fabric indestructible. In the event of spillage it simply gives the user added time to implement the same care regime as would be applied to non-treated fabric.

Care of leather upholstery

Vacuum regularly on a low setting to remove dust and grit which can mark leather.

Wipe with a slightly damp cloth and gently rub dry. A good proprietary hide food should be applied at least once a year and more often if the leather is in a dry atmosphere or close to a heat source.

Do not apply any polishes or waxes.

Leather is a natural product that will crease and puddle with wear over time.

Care of wood finishes

The fine finish applied during manufacture is a hard protective lacquer resistant to moderate heat and spillages of some beverages, but not alcohol. All spillages should be wiped off immediately with a damp cloth. The only cleaning necessary is again to wipe with a slightly damp cloth and buff with a soft duster.

Wood is a natural product that will age naturally over time and through exposure to daylight. Boss Design cannot guarantee an exact match on any wood products.

Care of chrome frames

Always clean chrome with high quality chrome cleaner to ensure bright finish.

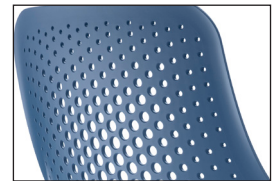

Care of painted/powder coated frames

Always clean with a slightly damp cloth using a mild solution of soap and water.

Care of plastics

Always clean with a slightly damp cloth using a mild solution of soap and water.

To ensure the maximum life expectancy of a Boss Design product it is important that a product is periodically cleaned and maintained.

Following the advice in this care guide will help your furniture products to retain their appearance for much longer.

We recommend that you inspect your products regularly to identify any signs of adverse wear or structural failure.
